Wastie, R.L. and Mainstone, B.J. **1** 64
Wycherley, P.R. **1** 38
Wycherley, P.R. and Chandapillai, M.M. **2** 140

Yip, E. *see* Lim, C. M.

Titles of papers are given in italics. To facilitate reference, the number of each Part is indicated in bold.

Acetate metabolism **4** 389
Acetyl-CoA in cellular metabolism **4** 401
Acetylene:
application of **2** 201–205
effect on latex **2** 202,
influence on latex flow **2** 203, 205
Ammonium sulphate **2** 172
Analysis of Smallholders' Rubber Marketing in West Malaysia **5** 604
Antimucin WBR **1** 88–90
Assessment of Smallholders' Central Processing and Marketing Schemes **5** 592
Atmospheric effect on yield **3** 345, 353
Axonopus compressus **2** 123, 144, 153

Bark:
consumption **3** 284, 300
copper sulphate injection to **2** 193, 194, 198, 200
renewal **1** 67–69; **2** 117, 122; **3** 300, 351
thickness **2** 110; **3** 289
Biochemical Problems of Rubber Synthesis **4** 389
Black stripe: **1** 86
control measures in Cambodia **1** 88–94
curative measures **1** 92, 93
effect of cure protective dressings **1** 91
fungicides for **1** 88–94
preventive measures **1** 88–90
protective dressings for **1** 91–92
screening of fungicides for **1** 88, 89
Black Stripe Disease and Control Measures in Cambodia **1** 88
Borreria latifolia **2** 153
Brachiaria mutica **2** 144
Branching habit **1** 47
Breeding:
effects of **1** 53
for increased vigour **1** 31, 32
for *Oidium* resistance **1** 27
for resistance to leaf diseases **1** 49, 50
hand pollination programme for **1** 52, 53
heritability of plugging index **1** 50
improving techniques for **1** 53
introductions by R.R.I.M. **1** 51, 52
methods **1** 51–53
nursery testing of seedling for **1** 40
selecting parents in relation to latex vessel rings **1** 43
small-scale testing for **1** 40
value of partition ratio for breeding **3** 259, 262
Breeding and selection schedules **1** 40

Breeding for Multiple Characters of Economic Importance in Hevea*—Preliminary Assessment of Recent Selections* **1** 27
Breeding *Hevea* in Ceylon **1** 27–36
Breeding of Hevea **1** 38
Brown bast **1** 42
Budwood:
phytotoxicity experiments on PB 86 **1** 91, 92

Cajanus cajan **2** 150
Calcium **2** 143
Calcium salts and yield depression **4** 506
Calopogonium caeruleum **2** 148, 152, 153, 156
Calopogonium mucunoides **2** 141, 158
Captane **1** 89
Canavalia ensiformis **2** 150
Canavalia gladiata **2** 150
Carbohydrate breakdown in latex **4** 417, 421, 433–442
Carbohydrate catabolism:
enzymes of **4** 448, 449
schematic representation of pattern of **4** 453
Carbohydrate content of cell sap and latex serum **4** 447, 448
Carbohydrate Metabolism in Hevea *Latex—Availability and Utilisation of Substrates* **4** 445
Cash crops **2** 138
Cassia cobanensis **2** 108, 150, 151
Cell sap **4** 445–448
Centothecca lappacea **2** 123
Central Processing Schemes:
budgeting for **5** 587, 598, 601–603
factors pertinent to success of:
administrative efficiency **5** 594
competition from buyers **5** 595, 596
confidence of smallholders **5** 594
developments of **5** 592
factory efficiency **5** 595
field operations **5** 594
payment for material **5** 595
premium for sale of rubber **5** 595
returns from **5** 632, 633
transport cost reductions **5** 595
financial benefits of **5** 596, 598
future developments of **5** 596, 597, 600
initiation of by R.R.I.M. **5** 588, 592
Meru and Rantau **5** 593
Centrosema pubescens **1** 100, 101; **2** 107, 123, 126, 141, 156, 158
Ceylon soils:
basis for classification of **2** 218
comparison with Malayan **2** 221, 223
description of soil series:
Agalawatta **2** 220, 222
Boralu **2** 220–222
Deniya **2** 221, 222

Ceylon soils (contd.):
description of soil series (contd.):
Hommagama **2** 219, 222
Madampe **2** 221, 222
Matale **2** 219, 222
Parambe **2** 219, 222
Ratnapura **2** 220, 222
Changes in Organo-Mineral Composition and Respiratory Activity of Hevea *Latex Associated with Intensive Tapping* **4** 484
Cholesterol pathway **4** 390
Cleome ciliata **2** 153
Clitoria rubiginosa **2** 146, 153
Clonal family:
PB 5/139 × RRIC 52 **1** 29
RRIC 52 × PB 86 **1** 29
RRIC 52 × RRIC 7 **1** 29
T 170 × RRIC 52 **1** 29
Clonal Variation in Latex Flow Pattern **3** 264
Clones:
comparison of by vigour and productivity **3** 260
depth of tapping experiments on:
GT 1 **3** 348–351
PB 5/51 **3** 348–351
differences in leaf nutrient contents between **2** 225–238
different responses to yield stimulation **3** 271, 272
girth and yields of *Oidium* tolerant in Ceylon **1** 30
giving initial favourable response to full and reduced spiral systems **3** 303
highest yielding in Kuruwita, Ceylon **1** 31
performance of in Cambodia **1** 19–23
AVROS 308 **1** 20
AVROS 427 **1** 21
Ceylonese **1** 23
International Exchange Clones, 1954 **1** 22, 23
Javanese **1** 23
Malaysian **1** 22
Mil K 3/2 **1** 20
Nab 15 **1** 21
Sumatran **1** 22
relationship between age and nutrient content of leaves in:
PB 86 **2** 226–238
RRIM 513 **2** 226–238
RRIM 605 **2** 226–238
RRIM 623 **2** 226–238
RRIM 701 **2** 226–238
resistance to leaf diseases **1** 50, 57
response of *Dothidella*-resistant to *Oidium* **1** 33, 34
response to tapping intensity and stimulation **3** 301
selection in Cambodia **1** 21, 25
susceptibility to *Dothidella ulei* **1** 11–17
susceptibility to *Phytophthora* leaf diseases **1** 81–83
tapping systems for young trees of modern **3** 301–306

Clones (contd.):
tapping systems in estate and smallholding situation for:
GT 1 **3** 360–371
PB 5/51 **3** 360–371
PB 5/63 **3** 360–371
PR 107 **3** 360–371
RRIM 513 **3** 360–371
RRIM 600 **3** 360–371
RRIM 605 **3** 360–371
RRIM 607 **3** 360–371
RRIM 612 **3** 360–371
RRIM 623 **3** 360–371
used on smallholders' newplantings **5** 587
wintering effect on:
GT 1 **3** 355
PB 86 **3** 355, 356
PR 107 **3** 355, 356
yield of PR 107 **3** 330–340
AVROS 308 **1** 20, 21, 25
AVROS 427 **1** 21
AVROS 529 **1** 23
AVROS 1060 **1** 22
AVROS 1191 **1** 22, 25
AVROS 1591 **1** 22, 25
AVROS 1734 **1** 22, 25
AVROS 1907 **1** 23, 25
AVROS 2012 **1** 23, 25
AVROS 2037 **1** 23, 25
Ch 26 **1** 33
FX 25 **1** 56–62
FX 4037 **1** 57–62
GT 1 **1** 20, 25
IRCI 7 **1** 22
IRCI 9 **1** 22, 25
IRCI 13 **1** 22, 25
IRCI 22 **1** 21, 22, 25
IRCI 23 **1** 22, 25
IRCI 30 **1** 22, 25
KHA 1 **1** 25
KHA 7 **1** 25
KHA 10 **1** 25
KHA 11 **1** 25
KRS 13 **3** 271, 272
LCB 870 **1** 27, 56–62
LCB 1320 **1** 56–60, 62; **3** 271, 356–358
Mil K 3/2 **1** 21
Nab 15 **1** 21, 25
OY 1 **3** 356
PB 5/51 **1** 49, 64, 65, 71; **3** 271
PB 5/60 **3** 271, 272
PB 5/63 **3** 272
PB 5/139 **1** 27

Clones (contd.):
PB 28/59 **1** 25
PB 86 **1** 20, 27, 51, 91, 93; **2** 123, 226–238; **3** 287, 289, 290, 356–358
PR 107 **1** 20, 21, 25, 93; **3** 271, 272, 281, 287, 289, 290, 356, 358
PR 249 **1** 23
PR 250 **1** 23
PR 251 **1** 23, 25
PR 253 **1** 23, 25
PR 255 **1** 23, 25
PR 258 **1** 23
PR 259 **1** 23
PR 261 **1** 23
RRIC 6 **1** 23, 25
RRIC 7 **1** 24, 25, 27
RRIC 22 **1** 24
RRIC 36 **1** 24, 25
RRIC 41 **1** 24, 25
RRIC 42 **1** 24, 25
RRIC 45 **1** 24, 25
RRIC 52 **1** 27, 31
RRIM 501 **1** 39; **3** 259, 260, 271, 272, 281
RRIM 512 **1** 25
RRIM 513 **2** 226–238; **3** 281
RRIM 526 **1** 24, 25
RRIM 527 **1** 24, 25
RRIM 600 **1** 39, 47, 48, 51; **3** 287
RRIM 603 **2** 143
RRIM 604 **3** 260–262
RRIM 605 **1** 24, 25, 71; **2** 226–238; **3** 259, 260
RRIM 607 **1** 25; **3** 287
RRIM 610 **1** 25
RRIM 612 **3** 260–262
RRIM 614 **1** 25
RRIM 618 **3** 260–262
RRIM 621 **3** 260–262
RRIM 623 **1** 24, 25; **2** 226–238
RRIM 701 **1** 71; **2** 226–238
SPRM 1 **1** 25
Tjir 1 **3** 281, 356, 358; **4** 495
WR 101 **1** 23, 25
Copper dusting **1** 77
Copper sulphate injection to bark **2** 193, 194, 198, 200
Cordia cylindristachya **2** 147
Corticium **1** 20–25
Covers (*see also* under legumes and specific names):
and bark thickness **2** 110
and leaf disease **2** 110, 123
and secondary leaf fall **2** 124
and tree rooting **2** 110
and wintering **2** 110

Covers (contd.):
application of nitrogen in relation to **2** 113, 115, 117
effects of **2** 109
effects of grasses, mainly *A. compressus* **2** 140
effects of in mechanically and manually cleared replants **2** 158–164
foliage analysis in trials **2** 110, 142, 143
future research on **2** 111
in relation to leaf nutrient **2** 131, 132
influence of ground **1** 100, 101
management **2** 123
management trial, Field 20: **2** 152–155
manuring in relation to **2** 113, 115, 117, 126–138
occurrence of *Fomes* in relation to **1** 101
of legumes **2** 107
performance of ground **2** 107–111
root counts in **2** 121
trial in Field 17:
covers employed **2** 145, 146
foliar analysis in **2** 147
girth differences between treatments in **2** 146, 147, 148, 150
incidence of root diseases in **2** 148, 149
trial in Field 23:
covers employed **2** 144
girth differences between treatments **2** 144–146
tree growth differences **2** 144
yield in **2** 144–146
trial in Field 24:
covers employed **2** 141
differences in treatment **2** 143
foliar analysis in **2** 142, 143
girth differences between treatments in **2** 141–143
incidence of root diseases in **2** 141
yield in **2** 142, 143
trials with legume mixtures **2** 150–152
trials with *stylosanthes gracilis* **2** 150–152
Cover Plant Trials **2** 158
Crotalaria anagyroides **2** 150
Crotalaria goreensis **2** 150
Crown budding:
at Tjiomas Experimental Garden:
best heights for **1** 60, 61
budding success of **1** 58, 61
effect of on growth and yield **1** 56–63
material and methods **1** 57
for protection against *Dothidella ulei* **1** 56–63
for protection against *Oidium* **1** 56–63
Cyrtococcum **2** 146

Desmodium gyroides **2** 150
Desmodium ovalifolium 2 147, 153, 156, 158
Dexon **1** 89
Dieback **1** 64, 71

Disease resistance **1** 6, 7
Diurnal Variation in Latex Yield and Dry Rubber Content and Relation to Saturation Deficit of Air **3** 341
Dothidella ulei **1** 33, 35, 50, 51, 52, 56-63
Dothidella ulei P. Henn. **1** 11, 15–17
Dry rubber content and variation **3** 297, 341–346
Dry trees **3** 290, 297

Economic Analysis of Tapping Experiments **3** 360
Economics of Controlling Secondary Leaf Fall of Hevea *Caused by* Oidium Heveae *Steinm.* **1** 64
Effects of Cover Plants **2** 140
Effect of Fertiliser Applications on Latex Properties **2** 181
Effects of Minerals Introduced Directly into the Wood of Acetylene Applied to the Bark of Hevea **2** 192
Effect of Oidium *and* Dothidella*-resistant Crowns on growth and yield of* Hevea Brasiliensis **1** 56
Effect of Tapping Rest at Different Seasons **3** 353
Electrode systems for plant studies **4** 524, 525
Electron Microscopical Studies of Latex Vessel System of Hevea Brasiliensis **4** 543
Electrophysiological Phenomena in Hevea Brasiliensis **4** 524
Electrophysiological response in *Hevea* seedlings **4** 527–531
Enzyme:
- assays of intermediary metabolites **4** 419, 421, 447
- catalysis **4** 401
- involved in carbohydrate catabolism **4** 422
- of carbohydrate catabolism in latex **4** 449
- with low activity **4** 422

Erythrina orientalis **2** 146
Estates:
- acreage of **5** 622
- effect of size on profitability **5** 638–642
- factors affecting:
  - management **5** 666–669
  - manuring **5** 669–671
  - processing and smoking **5** 667, 669, 670
  - production costs **5** 663–671
  - revenue **5** 662–663
  - tapping and collection **3** 361–365; **5** 663–665, 667
  - weeding **5** 668
  - yield **5** 658–663
- ownership and management of **5** 623, 624, 626, 627
- population and employment in **5** 625, 627
- profitability of different tapping systems in **3** 361–365
- profitability of rubber production on **5** 654–681
- revenue and expenditure on **5** 672–674

Eupatorium odoratum **2** 144, 153
Exploitation of Hevea **3** 283
Exploitation of Modern Hevea *Clones* **3** 292

Factors Affecting Profitability of Rubber Production on West Malaysian Estates **5** 654

Federal Land Development Authority **5** 583, 585
Fertilisers (*see also* under specific names):
application during production **2** 175
application effect on leaf nutrient **2** 132
application of in relation to covers **2** 113
application to immature rubber **2** 126, 128
application to mature rubber **2** 127
effect of during early productive phase **2** 178
effect of during immature period **2** 177
effect of on latex properties **2** 181–190
effect of on leaf nutrient **2** 208
effect of treatments on Rengam series soil **2** 165–172
profitability of using on Rengam series soil **2** 171
programme for Rengam series soil **2** 214, 215
recent advances in usage of **2** 207
requirements based on leaf nutrient status **2** 207, 208
treatment of cover plants **2** 107–109, 158
Ficus elastica **4** 566
Ficus fistulosa **2** 123
Ficus grossulariodes **2** 144
Flemingia congesta **1** 100, 101; **2** 135, 137, 158
Flemingia latifolia **1** 101
Flemingia semi-alata **2** 158
Foliage analysis **2** 142, 143, 207, 208
Foliage density in legume covers **2** 117
Foliage mineral composition **4** 487, 488
Fomes lignosus **2** 133, 141
Frey-Wyssling complex **4** 554, 555
Fungicides (*see also* under specific names):
for black stripe **1** 88–94
for *Fomes lignosus* **1** 104
translocation of 'Upjohn' **1** 89
Fylomae 90 **1** 89, 90

Genetic material organisation and regulation (*see also* under Breeding, Plant Breeding):
biology of chromosomes **4** 564–575
DNA birth **4** 570–572
development of **4** 572, 574
hormone depression **4** 578–579
in breeding *Hevea* **4** 579–580
molecular effect on substances **4** 579
phases in breeding **1** 1
RNA—Information copies of DNA **4** 573
repression *vs.* reproduction **4** 575–577
role of histones **4** 577, 578
Genetical Bases of Plant Breeding **1** 1
Girth influence on yield **3** 259
Girth increment **1** 67; **2** 128, 129; **3** 289, 294, 350
Gliricida sepium **2** 146
Gloeosporium **1** 43, 49, 50, 52; **2** 110
Gloeosporium alborubrum **2** 123
Glycolytic spectrum **4** 423

Ground Covers and Performance **2** 107
Growth:
effect of fertiliser application on Rengam series soil on **2** 165–172
effect of reduced canopy on **3** 260
in relation to *Oidium Heveae* **1** 68
influence of depth of tapping on **3** 348

Herbicides (*see also* under specific names):
for cover management **2** 153
Heveacrumb production in Meru and Rantau **5** 593
Hormonal stimulation effects **4** 488

Influence of Depth of Tapping on Growth and Yield of Hevea Brasiliensis **3** 348
Influence of Length and Position of Tapping Cut and Direction and Frequency of Tapping on Yield of Clone PR 107 **3** 330
Injection methods **2** 193, 198
Injection of minerals and acetylene **2** 193–205
Isoprene compounds **4** 389, 390, 392

Kinetic study:
glyceraldehyde-3-phosphate dehydrogenase (GAPD) **4** 430–433
phosphofructokinase (PFK) **4** 424–430
Kiserite **2** 126, 127

L-inositol taxonomic distribution in rubber production **4** 451, 452
Late drip **3** 350
Latex (*see also* under latex vessel plugging):
B-serum **4** 497–500
C-serum **4** 497–500
'bottom fraction':
discussion of composition of **4** 567, 568
ergothioneine in **4** 564–566
lysozyme and esterase in **4** 566, 567
proteins of **4** 563, 564
carbohydrate breakdown in **4** 417–424
carbohydrate metabolism in **4** 409, 410, 445–453
carbon dioxide in **4** 411, 412, 415
changes in organo-mineral composition of **4** 484–487
contraction of latex vessel effect on **4** 496
destabilisation by lutoids **4** 497
diurnal variation in yield of **3** 341–346
division by centrifugation **4** 394
dry rubber content **3** 270, 272
electrical effects on flow of **4** 524–538
enzymes of carbohydrate catabolism in **4** 449
fertiliser application effect on **2** 181–190
flow behaviour:
importance of study of **3** 264
measurement of flow rates **3** 265–272, 274, 275
physiology of *Hevea* (latex flow) **4** 494–508
principles determining **3** 264, 265, 274
flow curtailed by plugging **3** 274
incubation with radioactive hexoses **4** 417, 421

Latex (contd.):
inorganic phosphate in **4** 415
magnesium in **4** 415
microscopic examination of latex vessels **4** 497
mithochondria in vessels of **4** 408, 409
nitrogen fertilisation effect on **2** 184, 186
nitrogen in **4** 415
non-protein components of serum **4** 560–563
non-rubber particles of **4** 544
nucleic acids in:
content and function of **4** 469
isolation and fractionation of **4** 469–471
proportion in high- and low-yielding clones of **4** 473
quantitative determination of **4** 468, 469
nucleic acids on electropherograms **4** 414
organic non-rubber constituents of **4** 561
phosphate fertilisation effect on **2** 185, 186, 190
phosphorus in **4** 415
physico-chemical aspect of **4** 544
plugging index **3** 264, 267, 268, 270, 274–281, 346; **4** 495, 496
polymerising enzyme in **4** 395
potassium in **4** 415
prospects of physiological studies on **4** 506, 508
regulation of glycolysis in **4** 417–442, 445
respiratory activity of **4** 484, 487–492
review of flow studies on **4** 494
ribosomes in **4** 468, 472
separation of into zones **4** 477, 479
serum separation effect on **4** 412
starch gel electrophoresis of **4** 477, 479
stimulation of flow **3** 271, 272
structure **4** 496, 497
studies on composition of serum and 'bottom fraction' particles **4** 560–568
substrate and metabolism of CO_2 formation in:
glycolytic inhibitors and **4** 459–460, 465
limiting factors of anaerobic glycolysis in **4** 461, 462
materials and methods used **4** 457
preferential fructose utilisation **4** 463, 464
substrate for CO_2 formation **4** 457–459
sugar estimations in **4** 446
Latex concentrate **2** 186
Latex Metabolism **4** 407
Latex serum and carbohydrate content **4** 445, 446
Latex vessel plugging (*see also* under latex):
clonal behaviour and **3** 276–281
clonal variation in **3** 268, 276–281
concept of **3** 264, 274, 275
reduction of by application of Acetylene **2** 205
relation between d.r.c. and **3** 270, 278
response to tapping systems and **3** 281
tapping cut and **4** 495, 496
Latex Vessel Plugging, its Importance to Yield and Clonal Behaviour **3** 277

Leaf analysis **2** 160
Leaf diseases (*see also* under specific names): **1** 35, 39, 49, 50, 73–86; **2** 123
crown budding for resistance to **1** 56
international co-operation to combat **1** 57
measures to be taken against **1** 57
Leaf disease and covers **2** 110
Leaf nutrient content on Rengam series soil **2** 169, 170
Leaves:
changes in nutrient status of **2** 208
diagnosis of for determining nutrient status of trees **2** 207, 208
effect of tapping on mineral composition of **4** 415
optional levels for nutrient concentration **2** 209, 210
relationship between nutrient content and age of **2** 226–230
standardisation of sampling **2** 209
variation in nitrogen content of **2** 209, 225–238
Legume covers:
and earlier tapping **2** 113
and rooting **2** 110, 123
competition with young rubber **2** 130, 140, 155
control of soil erosion with **2** 110
effect on girth **2** 153
effect on immature rubber **2** 126
foliage density in **2** 117
management of **2** 110, 152–155
need for **2** 113
residual effects of **2** 133
root and pink disease in **2** 132, 133
Leptoporus lignosus:
conditions favouring **1** 96
control of **1** 98-101
detection of trees infested with **1** 102
evaluation of treatments **1** 102
exposure of root system for treatment **1** 105
growth of pathogen **1** 97
infective centres of **1** 97
influence of ground cover on **1** 100, 101
symptoms of **1** 98
treatments for **1** 104, 105
Leucaena leucocephala **2** 146
Lutoids:
acetone extraction of fragments **4** 515, 519
B-serum **4** 477
C-serum **4** 477, 513
description of **4** 513
development of ultrastructure of **4** 550–555
digitonin treatment **4** 515, 518
effect of applied potential difference on lutoid suspension **5** 516, 520
effect of repeated high-speed centrifugation on morphology of **4** 515–516
effect of tonicity changes on morphology of **4** 515, 520
electron microscopy of shadowed whole mounts of **4** 514
electron microscopic studies on **4** 513–521
in section **4** 515, 520

Lutoids (contd.):
negative staining **4** 514
neutral red staining of **4** 515, 519
organic acids in **4** 560
preparation of RNA from B- and C-sera **4** 478, 479
problems on the origins of **4** 521
saponin-treated membranes of **4** 514
triton X-100 treatment of **4** 515, 519
Lutoid destabilisation **4** 497
Lutoid structure:
chemical effects on **4** 504, 505
description of **4** 499–501
factors likely to damage **4** 501, 502
mechanical effects (shear) on **4** 503, 504
osmotic effects on **4** 502, 503
relation to yield stimulation **4** 505, 506
Lygodium flexuosum **2** 123

Magnesium **2** 126, 127, 143, 209–211, 214, 215
Magnesium in field latex **2** 182, 184, 186
Mahang beluka **2** 147
Majlis Amanah Ra'ayat (MARA):
grants for smallholders **5** 589
role of in smallholdings **5** 588, 592
Manganese **2** 143, 144, 169, 209, 214, 215
Manganese content in leaves **4** 415
Manuring (*see also* under fertiliser);
studies on **2** 126, 250–256
Manuring of Rubber in Relation to Covers **2** 126
MARA (*see* Majlis Amanah Ra'ayat)
Melastoma malabathrium **2** 145, 153
Mevalonic acid **4** 390, 391, 397
Mevalonic acid formula **4** 390
Micrococcus lysodeicticus **4** 566, 567
Mikania cordata **2** 107–109, 114, 121, 124, 133–136, 141, 144–146, 153
Mimosa pudica **2** 123; **4** 526
Moghania macrophylla **2** 141, 144, 147, 150, 153, 156
Molecular biology (*see also* under genetic material organisation and regulation):
birth of DNA molecule **4** 570–571
evolution from single to complex cells **4** 570–572
mutation and selection in life **4** 571
organisation and regulation of genetic material **4** 572–579
Molecular weights:
isoprenoid compounds **4** 389
rubber **4** 389
Mucuna pruriens **2** 150
Mudie Mission **5** 585

Natural covers (*see also* under covers, legumes and specific names):
and legume **2** 113
effect of in mechanically and manually cleared replantings **2** 159

Natural covers (contd.):
effect of on wintering **2** 164
management of **2** 152–155
Nephrolepis biserrata **2** 123
New Molecular Biology—From DNA to Development **4** 570
Nitrogen:
application of for immature rubber **2** 130
effect of on yield **2** 133-136
effect on immature rubber or non-legume covers **2** 126, 128, 129
residual effect of on ground covers **2** 113
Nitrogen fertilisation prior to tapping **2** 113
Nucleic Acids in Latex and Production of Rubber in Hevea Brasiliensis **4** 468
Nutrition: study by pot culture **2** 250–256

Oidium (*see also* secondary leaf fall):
breeding for resistance to **1** 27
clonal susceptibility to **1** 64
control of **1** 64
economics of sulphur dusting **1** 69–71
effect of on bark renewal **1** 67
effect of on canopy **1** 66
effect of on girth increment **1** 67
effect of on growth **1** 68
effect of on weed control **1** 68
effect of on yield **1** 66, 70
girths and yields of clones in Ceylon tolerant to **1** 30
operations for dusting **1** 71
results of **1** 66
O-oxyquinoline sulphate **1** 89
Organo-mineral composition of *Hevea* latex **4** 484–492
Ottochloa nodosa **2** 141, 144

Panicum pilipes **2** 123
Panicum trigonium **2** 123
Panogen 15 **1** 89
Paraquat **2** 153
Partition of Assimilates **3** 259
Paspalum conjugatum **2** 107, 123, 126, 144, 153
Passiflora foetida **2** 147, 153
Pentachloronitrobenzene (PCNB) **1** 81
Performance of *Hevea:*
FX 25 illegitimate **1** 12–17
H. benthamiana **1** 12–17
H. brasiliensis **1** 12–17
H. pauciflora **1** 12–17
H. spruceana **1** 12, 15
Performance of Recent Introductions of Hevea *in Malaya* **1** 11
Phaltane **1** 89
Phaseolus angularis **2** 150
Phenylmercuric dinaphthylmethana disulphonate **1** 88
Phosphate **2** 130, 143, 182, 184, 185
Phosphorus **2** 143, 208–211, 214, 215

Physiology of Hevea (*Latex Flow*) **4** 494
Phytophthora **1** 21–24, 52, 85, 86
Phytophthora cinnamomi **1** 81
Phytophthora fungus isolation **1** 81
Phytophthora heveae **1** 80
Phytophthora nicotianae var. *parasitica* **1** 80
Phytophthora leaf disease:
clonal susceptibility to **1** 80, 82
conditions for **1** 73, 75, 76
effects of copper dusting **1** 77
effects of *P. meadii* McRae **1** 73, 79
forecasting occurrence of **1** 76
in Malaysia **1** 79–86
infection and dissemination of **1** 74, 75
materials and methods for studies on epidemiology of **1** 73–75
symptoms of **1** 74
Phytophthora Leaf Disease in Malaysia **1** 79
Phytophthora palmivora (Butl.) Butl. **1** 79
Pimaricin **1** 81
Pink disease **2** 132
Pityrogramme calomelanos **2** 123
Plant breeding:
adaptation and genetic base **1** 2, 3
approach to **1** 1
biometrical genetics in **1** 4
effect of prolonged selection in **1** 2
essential points for **1** 9
heterogeneity in **1** 7, 8
heterozygosity in **1** 3, 7, 8
homozygosity in **1** 3
importance of **1** 1
importance of genetic variation in **1** 1, 4
inbreeding and outbreeding **1** 3
Mendelian techniques **1** 4
multiple selection in **1** 8, 9
neo-Darwinian micro-evolution **1** 1, 2
phases of **1** 1
polygenic variability in **1** 4–6
propagation systems in crop plants **1** 3
use of clones in **1** 4
use of pure lives in **1** 4
use of inbred annuals **1** 4
Planting material **5** 616
Planting recommendations for Cambodia, 1968 **1** 25
Plugging index:
clonal differences in **4** 495, 496, 508
effect of latex vessel contraction **4** 496, 504
flow rate and **3** 346
Polymerisation **4** 392
Pot Culture Technique for Study of Hevea *Nutrition* **2** 250
Potassium **2** 126, 127, 143, 168–172, 208–211, 214, 215
Production of NR in Malayan estates **1** 39

Protective dressings:
phenol determination of **1** 91
toxicity towards fungi **1** 91
Provisional Classification of Rubber Soils of Ceylon and their Relationship to Malayan Soils **2** 217
Pueraria phaseoloides **1** 100, 101; **2** 107, 113, 126, 141, 144, 153, 156, 158

Quebrachitol taxonomic distribution in rubber production **4** 451, 452

Recent Advances in Fertiliser Usage for Rubber in Malaysia **2** 207
Regulation of Glycolysis in Latex of Hevea Brasiliensis **4** 417
Relative Importance of Fertiliser Application during Pre- and Post-Tapping Phases of Hevea **2** 175
Rengam series:
growth response to fertiliser application on **2** 165–172
nutrient status of **2** 211, 212
yield response to fertiliser application on **2** 165–172
Replanting impact **1** 39
Residual Effects of Ground Cover and Nitrogen Fertilisation of Hevea *prior to Tapping* **2** 113
Respiratory activity of *Hevea* latex **4** 484–492

Variation in Leaf Nutrient Content of Hevea *with Clone and Age of Leaf* **2** 225
Verdasam **1** 89

Weed control **1** 68, 71; **2** 152
White root rot (*see Leptoporus lignosus*)
White Root Rot (*Leptoporus Lignosus*) *of Rubber on Lower Ivory Coast* **1** 96
Wind damage:
and branching **1** 47
and girth **1** 47
and trunk snap **1** 47
correlations between yield and girth **1** 47
in relation to fertiliser application **2** 110
of RRIM 603 **2** 143

Yield:
and clonal behaviour **3** 274

Yield (contd.):
and latex vessel plugging **3** 277–279
average in Malaysia **1** 38
correlations between latex vessel rings and **1** 44
diurnal variation in atmospheric conditions and **3** 345, 346
effect of legume covers on **2** 138
effect of sulphur dusting on **1** 66, 70
effect on with nitrogen application **2** 133–136
factors determining:
acetylene use on **2** 203–205
bark consumption **3** 284
depth of tapping **3** 284, 348
environmental conditions **3** 286
height of cut **3** 285
panel position **3** 286
previous tapping history **3** 285
rain **3** 353, 354
seasonal variation on **3** 353–357
slope and direction of tapping cut **3** 284
tapping rest on **3** 356–358
time of tapping **3** 284, 341–346
wintering **3** 354–356
in relation to covers **2** 115-117
in relation to fertiliser treatment **2** 114, 115, 117, 118
in relation to ground covers **2** 110
latex vessel rings in correlation with **1** 43
of unselected seedlings **1** 38
on smallholdings and estates for profit **5** 628–642
relationship of to girth **1** 44
Yield and plugging index **1** 50
Yield stimulation **2** 205; **3** 271, 272, 283, 301
economics of **3** 368–371
relation to lutoid structure **4** 505, 506
